

Donna Szeto

Software Engineer

szetodonna2@gmail.com | [linkedin.com/in/donnaszeto](https://www.linkedin.com/in/donnaszeto) | github.com/donnalikestocode | donnaszeto.com | [tiktok.com/@donnalikestocode](https://www.tiktok.com/@donnalikestocode)

TECHNICAL SKILLS

Frontend | React, TypeScript, Next.js, JavaScript, Tailwind CSS, HTML, CSS, component architecture, state management

AI Tools & Prototyping | Claude Code, AI-assisted prototyping, OpenAI APIs, Anthropic Claude API, prompt and interaction design

Backend & APIs | Node.js, GraphQL, REST APIs, AWS AppSync

Cloud & Data | AWS Lambda, DynamoDB, S3, SQS, Firebase, Supabase

Product & Analytics | Amplitude, A/B testing, feature instrumentation, cross-functional product development

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Splash Music

July 2025 - July 2026

A consumer platform enabling users to create, share, and explore AI-assisted music.

- Owned end-to-end development of user-facing features from ideation through launch, measurement, and iteration.
- Partnered closely with product and design to turn ambiguous ideas into intuitive, production-ready experiences.
- Re-architected the core creation flow to run asynchronously, allowing users to continue exploring while AI-generated mixes processed in the background.
- Improved the core creation success rate from approximately 30% to nearly 100% by resolving production data synchronization issues.
- Shipped onboarding and authentication improvements that contributed to growth from approximately 100 to 800–1,000 new users per day.
- Built user-facing social features including notifications, playlists, follows, comments, sharing flows, and responsive media experiences.
- Instrumented product experiences with Amplitude to measure user behavior and guide product decisions.
- Built a full-stack notification system powering real-time social updates.
- Designed shared authentication infrastructure using Clerk, including OAuth account linking and secure authentication flows.

Full Stack Software Engineer | Tempyl Technologies, Inc | San Francisco, CA

Oct 2023 - Jan 2025

A skincare platform supporting personalized user journeys through mobile and web applications.

- Collaborated with product and design to build user-facing features and internal tools for personalized skincare workflows.
- Designed and implemented end-to-end image-upload and routine-scheduling experiences across frontend, backend, and data layers.
- Redesigned the scheduling system to support more flexible and personalized routines for clients and internal teams.
- Translated evolving product requirements into maintainable interfaces while balancing user needs, business goals, and technical constraints.

SELECTED PROJECTS

Donna's World | Playable Engineering Portfolio

Next.js, React, TypeScript, HTML Canvas, Claude Code

- Reimagined the traditional portfolio as a playable pixel-art world, making it fun to explore my engineering experience through exploration rather than scrolling.
- Developed a custom HTML Canvas engine supporting character movement, collision detection, animated environments, dialogue interactions, and interactive UI.
- Leveraged Claude Code throughout development to prototype gameplay systems, evaluate technical tradeoffs, and rapidly iterate on the user experience.

Nurtur | AI Reflection Companion

ESP32-S3, React, Next.js, TypeScript, Tailwind CSS, BLE, Supabase, OpenAI

- Created an AI companion that encourages people to stay present by capturing meaningful moments and reflecting on them throughout the day.
- Engineered a capture-to-reflection pipeline spanning embedded hardware, mobile, web, and AI services.
- Connected the physical companion to cloud-based AI through Bluetooth communication and synchronized user experiences across devices.

RoadMap | Collaborative AI Trip Planner

React, TypeScript, Claude API, Mapbox, Supabase

- Simplified group travel planning by organizing scattered links, text, and videos into a shared interactive map.
- Integrated AI-powered location extraction, collaborative editing, authentication, and Google Sheets export into a unified planning workflow.
- Designed and shipped the product independently, owning product design, frontend architecture, and backend integration.

OTHER EXPERIENCE

Certified Public Accountant | Frank, Rimerman + Co. LLP Oct 2017- Nov 2021

- Managed a team of 10+ associates, delegating tasks and reviewing work to ensure timely and accurate delivery of tax filings for high-net-worth individuals, startups, and venture capital funds.
- Collaborated directly with firm partners to develop and implement strategic tax solutions, addressing complex client needs and ensuring compliance with federal and state regulations.
- Built and maintained strong client relationships by providing timely, effective responses to daily inquiries and compliance requirements, fostering trust and long-term partnerships.

EDUCATION & LICENSES

Hack Reactor | Advanced Software Engineering Immersive Program, US Remote May - July 2022

University of California, Santa Barbara | BS in Economics & Accounting | Minor in Statistical Science 2013 - 2017

Certified Public Accountant (CPA), Association of Certified Public Accountants
